

Project Design Phase-II

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-2091
Project Name	Implement Client Script & UI Policy(incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Example : DFD

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Incident User	Incident Form	USN-1	As a user, I can enter incident details in the Incident form.	Incident details can be entered successfully.	High	Sprint-1
Incident User	UI Policy	USN-2	As a user, I can see only the required fields based on incident information.	Unnecessary fields are hidden and required fields are shown.	High	Sprint-1
Incident User	Client Script	USN-3	As a user, I can enter valid incident information.	Incorrect information is validated and a message is displayed.	High	Sprint-1
Incident User	Field Control	USN-4	As a user, I can update incident information easily.	Fields are controlled according to the configured rules.	Medium	Sprint-1
Administrator	Configuration	USN-5	As an administrator, I can configure Client Scripts and UI Policies for the Incident form.	Client Scripts and UI Policies work as configured.	High	Sprint-2
